

# SanerNow Endpoint Management

SanerNow – Your ‘OS’ for managing and securing endpoints

## Today’s Reality

- There is limited visibility and control of endpoint systems
- It’s difficult to query endpoints for needed information across an IT infrastructure
- Endpoint management is time-consuming and inefficient

## The Challenge

Most companies rely on employees and IT consultants to manage their infrastructure. Without the resources and scale of a large IT department, it can be a struggle just dealing with routine user problems, let alone proactively defending the company against security threats.

Businesses need to take an innovative approach to ensure they stay protected, to look after remote users, to keep costs down and to reduce administration overhead.

## The Solution

**SanerNow Endpoint Management (EM)** is a cloud-delivered service that allows complete control over all your endpoint systems. It provides visibility into the status of endpoints and equips you with hundreds of built-in checks. SanerNow Endpoint Management provides necessary features for managing endpoints.

## Key Benefits

- ✓ **Comprehensive endpoint visibility**  
Make right decisions knowing the current state of endpoints. Gain total visibility to all the managed endpoints, common functions to administrate the endpoints, and canned reports for updates, insight and information that promotes timely action.
- ✓ **Increase productivity and save costs**  
Know problems early and act on them to resolve. Improve employee productivity by keeping the device downtime low. Identify issues before they become major problems. Manage remotely and decrease site visits.
- ✓ **Increase security and reduce risks**  
Reduce risks through endpoint compliance and automated software patching.

# SanerNow Endpoint Management

## Key Features & Capabilities

- ✔ Gather the network details and map of devices
- ✔ Get operating system host details, gather wireless information, and view installed patches, BIOS details, and event logs
- ✔ Check the status or health of Endpoint Protection Software such as installed antivirus programs
- ✔ Block unwanted programs or applications, uninstall or install software remotely
- ✔ Search for and remove sensitive data such as credit card information and social security numbers
- ✔ Run queries to check any abnormal behavior or unusual network activity that is symptomatic of an attack
- ✔ Inspect the system health and fine tune performance by cleaning the system or registry
- ✔ Shut down or reboot system devices after installation or uninstallation of software

*Bring Saneness to your endpoint security and systems management with SanerNow, a SaaS-based solution.*

*Saner Now – one platform, multiple use cases, one solution. Simplify IT security and management. Reduce costs.*
